BY HER MAJESTY'S ROYAL LETTERS PATENT.

MOREWOOD and ROGERS' PATENT GALVANIZED TINNED IRON.—This article was at first sold under the name of Galvanized Tin Plates, but the Patentees finding that the public, in some instances, overlooking the word Tin, confounded the article with Galvanized Iron, and that the character of their metal has thereby sustained injury, are desirous of giving it a name so distinctive as to prevent such mistakes, and consequent disappointment to purchasers in future.

They therefore respectfully request purchasers to inquire for Morewood and Rogers' Patent Galvanized Tinned Iron.

In order to enable the public readily and at first sight to distinguish between the two metals, it may be well to inform them, that Galvanized Iron has a plain zinc-like appearance, while Morewood and Rogers' Patent Galvanized Tinned Iron has a smooth crystalline surface.

MOREWOOD and ROGERS' PATENT GALVANIZED TINNED IRON.

Patronized by the Admiralty and the Honourable Board of Ordnance, being extensively used in her Majesty's Dock-yards, at the Tower, and elsewhere for every variety of Roofing, and other purposes, where a strong light, cheap, and durable material is required.

It has been found by experience that this article is beyond all comparison superior to zinc; possessing as it does all the advantages arising from the strength and firmness of iron, combined with perfect immunity from rust; whilst it is free from the very serious objection which applies to zinc, viz. its contraction and expansion, consequent upon every change of temperature, and from which circumstance leakage must of course result.

This material is not likely to be destroyed by fire, as is the case with zinc and lead, which melt and run down, thus freely admitting fresh air to the fire, and causing it to burn more fiercely. It is therefore obviously well adapted for all the purposes above named, and most importantly so when there is the possibility of fire. It is also peculiarly suitable for chimney-tops, gutters, and out-door work generally, possessing the strength of iron, without its liability to corrosion. It is by far the most economical metal roofing that can be obtained, in consequence of its strength, as it may be laid without boards, and upon the lightest rafters.

This mode of preserving metal from rust does not only apply to sheet-iron, but also to manufactured iron in any form, as bolts, nuts, hinges, nails, &c. &c. For full particulars, apply to

CALIGRAPHIC BLACK LEAD PENCIL,
MANUFACTURED BY E. WOLFF AND SON,

No. 23, CHURCH-STREET, SPITALFIELDS, LONDON.

The Caligraphic Pencils have been invented by E. Wolff and Son, after the expenditure of much time and labour. They are the result of many experiments, and every effort that ingenuity and experience could suggest has been made to insure the highest degree of excellence, and the profession may rely upon their being all that can be desired.

They are perfectly free from grit; and for richness of tone, depth of colour, delicacy of tint, and evenness of texture, they are not to be equalled by the best Cumberland lead that can be obtained at the present time, and are infinitely superior to every other description of Pencil now in use.

The Caligraphic Pencils will also recommend themselves to all who use the Black Lead Pencil as an instrument of professional importance or recreation, by their being little more than half the price of other Pencils:—

H, HH, HHH, HB, B, BB, F, FF, W*	4s. per dozen.
BBB, EHB	8s. „
BBBB	12s. „

* This Pencil is particularly recommended for writing and counting-house use.

An allowance on every gross purchased by artists or teachers. May be had of all artists' colourmen, stationers, booksellers, &c.

A single Pencil will be forwarded as a sample, upon the receipt of postage stamps to the amount.

CAUTION.—To prevent imposition, a highly-finished and embossed protection wrapper, difficult of imitation, is put round each dozen of Pencils. Each Pencil will be stamped on both sides, "Caligraphic Black Lead, E. Wolff & Son, London."
